FREEDOM OF INFORMATION REQUEST - Ref: FOI/012398 – INJURIES

I am trying to find out information about an increase in women and men presenting with injuries caused through consensual sexual intercourse. Under the Freedom of Information Act please could you provide me with following information:

Do you keep such records?

If yes could you provide information the numbers of those presenting with injuries caused by consensual intercourse over each of the last five years?

Could you further break these figures down by age? Ideally 17 and below, 18-24, 25-34, 35-44, 45-54 and plus 55.

Finally could you provide me a list of indicative injuries/conditions?

All patient injuries are recorded electronically using the ICD10 classification system, but there is no ICD10 code for consensual sexual activity as a cause of injury, so we are unable to provide this information.
