FREEDOM OF INFORMATION REQUEST FOI/013119 – Patients with infections

How many patients have been infected with carbapenamase-producing organisms in your trust?

How many patients with an infection from a carbapenamase-producing organism have died?

The Trust does not hold this information in a centralised electronic reporting tool.

The Trust could only identify patients in whom it had isolated one of these organisms. A clinical review of all of these patients notes would be required to identify whether they were infected (as opposed to colonised). Access to patient notes is exempt under FOI exemption 40 personal information.
