Freedom of Information request 014549

I am writing to request information related to pelvic organ prolapse statistics held by Dudley Group NHS Foundation Trust under the above mentioned Act. In terms of pelvic organs, I refer to the pelvic organs such as the bladder, uterus, vagina, bowel, and rectum. I would like you to provide me with the following information:

1. The total figure for Dudley Group NHS Foundation Trust spending on treatment for pelvic organ prolapse for the last available fiscal year. -

- The total cost for these 164 patients was £494,563.

2. The number of males and females that were admitted to hospitals under Dudley Group NHS Foundation Trust as a result of pelvic organ prolapse between 01 April 2017 and 01 April 2018.

There were a total of 164 patients admitted as a result of pelvic organ prolapse between 01 April 2017 and 01 April 2018 .

162 Patients were electives and 2 were emergency total 164.

161 were female and 3 male Patients.

3. The total number of pelvic organ prolapse surgeries that were performed between 01 April 2017 and 01 April 2018.

A total of 164 patients had Pelvic organ prolapse surgeries that were performed during the period 01/04/2017 - 31/03/2018.
There were 161 female patients and 3 male patients

4 The total number of patients who were recommended pelvic floor muscle training as treatment for their pelvic organ prolapse between 01 April 2017 and 01 April 2018.

This information would be held in individual patient records only. Patients who are referred by GP with prolapse are offered pelvic floor muscles training either by GP or by the team in the clinic.

5. How many hysterectomies were performed under the Dudley Group NHS Foundation Trust between 01 April 2017 and 01 April 2018?

Total 253 hysterectomies were performed in the period 01/04/2017 - 31/03/2018. (Based on any procedure order not just primary)

Please could you also provide the top 5 causes of these hysterectomies and their contributing percentage to the total figure

Of those 253 hysterectomies performed the top 5 conditions based on the primary diagnosis are as follows:

Top 5 diagnosis codes based on 1st diagnosis (primary)
1: Leiomyoma of uterus, unspecified
2: Malignant neoplasm: Endometrium
3: Incomplete uterovaginal prolapse
4: Excessive and frequent menstruation with regular cycle
5: Endometriosis of uterus

Please provide the information for male and female statistics separately. If the data is not available between 2017-2018, please provide data for the next available year.
