FREEDOM OF INFORMATION REQUEST FOI/015973 – Covid vaccinations

How many NHS staff currently working at your trust remain unvaccinated (no dose or only single dose) with a Covid19 vaccine? Including bank/agency workers.

What percentage of your overall staff does this equate to?

- Previously, as vaccinations were not a mandatory requirement (it was personal choice) the Trust had no need to record the vaccination status of staff on Trust systems.

Going forward staff are now being asked to provide their vaccination passports for the Trust to be able to monitor the vaccination status of staff. This only commenced during December and is an on-going process, in which we are working with staff to understand their status.

Since the start of the pandemic (01/03/20), with your data from staff absence due to Covid19, contact tracing and Healthcare acquired infection (HCAI), what percentage of HCAI is directly attributable to Covid19 infection in an NHS frontline worker? - Not known, staff sickness records do not record this level of detail

Since the vaccination programme has started (Approx Dec 2020), what is the breakdown of this being from a covid 19 vaccinated NHS worker or unvaccinated/single dose vaccine NHS worker? - Not known

If not directly attributable, what is the rate of your patients in non Covid19 wards/area getting a HCAI and becoming infected with Covid19 within a set time frame (~10days) of an NHS worker in that ward/area testing positive for Covid 19? And what is the breakdown of this being a Covid19 vaccinated NHS worker or non-vaccinated/single vaccine dose NHS worker? - Not known, information not electronically recorded to this level of detail
