

Bowel Obstruction

Colorectal/Stoma Care Patient Information Leaflet

Dear

Your doctor has examined you/reviewed tests you may have had done, and feels that you are at risk of obstruction.

What is bowel obstruction?

Bowel obstruction is a condition in which the bowels cannot work properly due to a narrowing of the bowel. The narrowing may be due to a cancerous tumour or inflammation of the bowel. If your bowel (tube) becomes blocked, food content will not be able to pass through the bowel and may cause symptoms.

Symptoms of bowel obstruction

- Cramping tummy pain/discomfort that comes and goes in waves (colic).
- Feeling sick and sometimes vomiting.
- Feeling bloated or a feeling of fullness.
- Heartburn (acid reflux).
- Constipation (not passing wind or a bowel motion).
- Noisy gurgling from the abdomen.

If you have any of the above symptoms, please ring the Surgical Assessment Unit at Russells Hall Hospital urgently on 01384 244359 and inform the staff of your symptoms and that you are an obstruction pathway patient.

Risks involved with bowel obstruction

Perforation – disease has caused a hole in the bowel, which leads to the bowel's contents leaking into the abdomen.

Aspiration – the inhalation of stomach contents into the lungs.

Dehydration – lack of fluids in the body.

Treatments of bowel obstruction

Operation

In some cases, an operation can be performed to unblock the bowel. This may involve bowel resection, adhesiolysis (release of adhesions), bypass procedure and/or stoma formation. Surgeons may remove the affected part of the bowel and suture (join) the two ends together. If it is not possible to connect the two ends together, they will bring out the end of the bowel through an incision in the abdomen and a stoma bag will collect your stool.

Stents

Self-expanding metal stents (SEMS) are metallic tubes (or stents) used to hold open the bowel if it is obstructed by a tumour so that stools can pass through.

They can provide rapid relief of distressing symptoms in patients not considered fit for surgery, or for those who have symptoms of bowel obstruction which need to be treated urgently.

Supportive care

In some cases, patients are not suitable for treatment, and the focus would be on managing the symptoms of the bowel obstruction.

What if I have any more questions?

If you have any questions, please contact the colorectal nursing service team on 01384 244286.
