FREEDOM OF INFORMATION REQUEST FOI/013098 – Cancer drug therapies

On average how many patients receive intravenous cancer drug therapies (includes monoclonal antibodies (mAbs)) on a daily basis across all hospital chemotherapy day units in your organisation/Trust?

On working days (Mon-Fri), clinical areas within The Trust treat an average of 25 patients/day with intravenous chemotherapy. This is for cancer indications only and is in addition to patients receiving oral, subcutaneous, intravesical or intrathecal doses.
