FREEDOM OF INFORMATION REQUEST FOI/015313 – Atopic dermatitis

I would really appreciate if you could answer two questions.

First, could you tell me how many Atopic Dermatitis patients have been treated by your trust in the latest four months that you have data available for, and how many of these patients were paediatric versus adult?

- There are Dermatology clinics held at the Trust but there is no specific clinic for eczema treatment so we are not able to give numbers of patients who attend just for eczema treatment'

Second, for all Atopic Dermatitis patients (adult plus paediatric) treated by your trust in the latest four months, could you please provide the number of patients treated with each of the following:

Please see the figures below, the numbers relate to any patients issued any of these drugs for dermatology.

High Potency topical steroids - 106

Ultraviolet light therapy

Azathioprine - 8

Ciclosporin - 22

Methotrexate- 94

Mycophenolate mofetil - 3

Acitretin - 36

Alitretinoin - 0

Dupilumab - 12

Upadacitinib - 0

Tacrolimus - 30

Pimecrolimus - 12
